

Welcome to Operion

Operion is your operations hub. From one place you can take customer bookings, send crews out on jobs, keep track of the money, pay your team, and handle the occasional damage claim. This guide walks you through the everyday tasks in plain language — no technical background needed.

Tip. Everything in Operion is designed around two ideas: a **booking** (a customer's job) and a **route** (the crew assignment that gets it done). Keep those two in mind and the rest falls into place.

1 Signing in

1. Open the admin site in your browser (Chrome, Safari, Edge, or Firefox).
2. **Owners:** leave the email field blank and enter the owner password.
3. **Everyone else:** enter your email and password.
4. Crew members are taken to the **Crew Portal**; admins and managers land on the

Operations home.

Note. For your security you're signed out after **10 minutes** of inactivity (and after 2 hours no matter what). Just sign back in. Forgot your password? Ask an administrator to set a new one for you — there's no self-service reset.

2 Finding your way around

The dark navigation bar is your map.

- **On a computer:** the top bar shows your main sections, a **More** menu for

everything else, a **search** button, and a **Book Now bell** that shows how many online requests are waiting.

- **On a phone:** a bar across the bottom holds your main sections with a big

Book Now (+) button in the middle, and a **More** sheet for the rest.

- **Press ⌘K (Ctrl+K)** anywhere to open the **command palette** and jump straight

to any page — it's the fastest way to get around.

- The floating **“+” button** always starts a **New assignment**.

Section	What it's for
Home	Your daily snapshot (see §3)
Schedule	Everything happening, by day or week
Operations	Your crew assignments (routes)
Messages	Talk to your crew and see reminders
Crew	Your team roster and pay
Book Now	Online customer requests waiting for you
More → Businesses, Equipment, Claims, Pay, Communications, Settings	Everything else

Tip. A red badge or chip always means “this needs attention.”

3 Your daily dashboard (Home)

Home gives you the pulse of the day at a glance:

- **Needs confirmation / Needs reassignment / Tomorrow** — quick counts that click

through to the exact list.

- **Money** — a shortcut to your revenue and profit view.
- **Claims** — a quiet summary that only appears when there's something open.
- **Book Now Requests** — how many online submissions are in, broken down by stage,

each tile clicking straight to that group.

- **Today's / Tomorrow's operations** — expandable cards for each job with the crew,

report time, address (tap to navigate), and instructions.

Tip. After 5 pm, Home automatically switches its focus list to **tomorrow** so you can get a head start.

4 Taking a booking (Book Now)

When a customer requests a quote online, Operion helps you price it fast.

How it flows:

1. The customer picks a service, answers a few questions, and uploads photos.
2. For junk-removal-style jobs, Operion's AI looks at the photos and suggests a

size and a price range. **The AI only makes observations — your pricing rules always set the final number.**

1. Clear, simple jobs get an **instant quote**. Anything uncertain — possible

hazardous materials, very large loads, or blurry photos — is sent to **Manual Review** for you to price by hand.

1. Everything lands in your **Book Now** queue, grouped by stage. You'll also get a

text and email when a new request arrives.

Your job: work the **Book Now** queue each day. Clear the **Manual Review** items first, then send out the **Quote Ready** ones.

Note. If the AI can't read the photos or hits a snag, the request is never lost — it's simply held for you to handle. Moving and delivery jobs are always

priced by hand, not by AI.

5 Bookings & customers

Open **Bookings** (under *More*) to manage customer jobs.

- **Search** by name, phone, email, or booking/invoice number.
- **Filter** by status (active, unpaid, unscheduled, completed, and more), and

toggle **Archived** or **Test** items.

- Open any booking to see and edit the customer's details, add **internal notes**

(never shown to the customer), attach photos, and review the full history of messages and status changes.

- **Export** the current list to a spreadsheet, or **archive** several at once.

Note. There isn't a separate "customer file." A customer's information lives on their booking, and the **Customers** tab gives you a quick read-only rollup of who has booked, how often, and how much they've paid.

6 Dispatching a crew

Jobs get done by assigning crew to a **route** (an operation).

Create a route: press "+" → **New assignment** and follow the steps — choose the business, set the price and equipment, enter the address, pick the date/time (one-off or recurring), then add crew and their pay.

Run the route (open it from Operations):

1. **Assign** crew, then **Send** them the assignment text.
2. Crew **confirm** (from a text link or the portal). The route's status updates

itself as they respond.

1. On the day, **Mark complete** — or **No show** / **Cancel** if plans change.
2. From a completed route you can **file a claim** if something was damaged.

Status	Meaning
Draft	No crew assigned yet
Assigned / Awaiting confirm	Crew added / texted, waiting on them
Confirmed	Everyone's in
Declined / No response	Needs your attention
Completed / No show / Cancelled	Done (final)

Tip. The **Operations** list has an **Attention** filter that surfaces declined, unanswered, or short-staffed routes — check it first thing each morning.

7 The schedule

Schedule shows everything on one board — online bookings and crew routes together — by **Day** or **Week**, plus **Pending** and **Unscheduled** views. It flags **conflicts** (the same crew, truck, or time booked twice) so you can catch them early.

Note. The schedule is for *seeing* your day. To change a job, click its card to open the booking or route and edit it there — there's no drag-and-drop.

Availability (under *More* / Settings) controls how many online jobs you accept per day, your online deposit, and any closed/blackout days.

8 Money: getting paid & paying your crew

Where	What you do
Finance / “Money”	See revenue in, payouts out, and estimated profit — filter by date, business, or crew
Contractor Pay	Group completed routes by contractor for a pay period; see net owed after any claim deductions
Pay Statements	Generate, print, email, or void a crew member’s statement; review pay-correction requests
Client Invoices	Bill business clients from completed routes; send a payment link (customers can pay online)
Analytics	Revenue trends, outstanding balances, and revenue by service, city, or ZIP

Tip. Statements and invoices print to PDF from your browser (⌘P → Save as PDF), and can be emailed to crew and clients directly.

9 Handling claims

Claims (under *More*) tracks damage and cost recovery.

1. **Open a claim** — from the Claims page, a business, or a completed route (which snapshots the job details automatically). Each claim gets its own number.

1. **Assign responsibility** — split the amount across the crew involved (equally, by percent, or by dollar).

1. **Recover** — start a **weekly deduction** (automatically capped at what the contractor actually earned that week), record a cash **payment**, **waive** a balance, or **adjust** with a reason.

1. **Close** the claim when it’s settled.

Crew are texted about claims that affect them, and everything is logged.

Warning. Closing a claim with money still owed, or deleting a claim that already recovered money, asks you to confirm — deleting erases the record of why a contractor's pay was reduced.

10 Messages & notifications

- **Messages** is your two-way thread with the crew (dispatch, reminders, replies).
- **Communications** (under *More*) shows channel health, lets you preview message

templates, send a test, and review recent/failed messages.

- Customers automatically get texts and emails for confirmations, reminders,

completion, and payment. Crew get assignment texts plus optional **confirmation** and **morning-of** reminders (both on by default — toggle them in Settings).

- You (the owner) get alerted about new submissions, customer replies, and other

important events.

Note. Text and email only go out when the messaging providers are configured. There is no mobile push app.

11 Settings you'll actually use

Open **Settings** (admins only) to:

- Turn your **owner text/email alerts** on or off and set where they go.
- Turn crew **confirmation** and **morning-of** reminders on or off.
- Choose whether crew see their **pay amount**.

Other useful configuration lives nearby: **Availability** (online capacity & deposit), **Disposal pricing**, **Equipment**, **Promo codes**, and your **Cancellation & Refund policy** (which keeps a version history).

Tip. Managers can run daily operations but can't change settings, manage

logins, or configure pay — those are admin-only.

12 Your team's Crew Portal

Your crew get their own simplified app at the portal. They sign in with their email and password to:

- See **today's jobs** and one-tap **acknowledge** them.
- **Clock in/out** (with location) on confirmed routes.
- View **routes**, **pay** and statements, **documents**, and **messages**.
- Submit **availability** and **time-off** requests.

Crew only ever see their own information.

13 Releases (owner only)

The **Release Center** lets the owner review a build and, when needed, publish an update or roll back to the previous version — always with a typed confirmation so it can't happen by accident.

- **System Details** shows the current build and settings (safe to view).
- **Publishing** and **rolling back** require the owner to type an exact confirmation

phrase, and only take effect in the live production environment.

Warning. Publish and rollback are the only actions that change your live website. They're owner-only, require a typed phrase, and are safe to **review** at any time — nothing changes just by looking.

14 Tips & troubleshooting

If you see...	It means...	Do this
A booking stuck in Manual	The AI wasn't confident	Price it by hand from the Book Now

If you see...	It means...	Do this
Review	enough to auto-quote	queue
“Admins only”	Your account can’t open that page	Ask an administrator, or sign in with an admin account
Signed out unexpectedly	10-minute inactivity timeout	Sign back in
Can’t Mark complete	The route isn’t Confirmed yet	Confirm the crew first
No texts/emails going out	Messaging isn’t fully configured	Check with your administrator
A page asks you to “set up Redis/Upstash”	Analytics storage isn’t configured	Ask your administrator
Daily rhythm that works well: clear the Book Now queue → work the Attention filter in Operations → confirm crew for today and tomorrow. Weekly: run Pay and send Statements , review Time Off and Availability , check open Claims , and send Invoices .		

15 Quick glossary

Term	Plain meaning
Booking	A customer’s job/quote
Route / operation / assignment	The crew’s dispatch for a job
Book Now	The online request queue
Manual Review	A quote the AI handed to you to price
Crew Portal	Your team’s simplified app
Claim	A damage/cost-recovery case
Statement / Invoice	What you pay crew / what you bill

Term	Plain meaning
